Curious about careers in research? Apply for the...

Summer Research Experience in Aging & Neurological Diseases Program

Through this immersive 8-week program, students will...

- Receive a $3,200 stipend and a Metro transit pass.
- Work in research labs with top investigators and diverse topics.
- Receive an orientation to basic research skills and approaches.
- Build a social network with student peers and faculty.
- Participate in weekly workshops taught by Washington University instructors and other experts.

Students will learn about three neurological conditions and diseases that often interplay with the aging process: stroke, Alzheimer’s disease and other dementias, and Parkinson’s disease, while gaining relevant skills for working in research.

Eligibility

Program is open to currently enrolled undergraduate students. You must have completed at least 2 semesters by program start date.

Students attending universities and colleges in the St. Louis Metropolitan Region (includes counties in MO and IL) will receive priority.

Previous research experience is not required.

Timeline

Application deadline: March 16, by the end of the day

Program dates: June 5–July 27

Students are expected to participate in the program full-time, during the day, Monday through Friday.
