

Graduate courses

Note: The following list of courses are offered periodically as need is determined by the department and faculty.

[400-level courses](#) are intended to serve both undergraduate and graduate students. The GSAS Bulletin (p. 35) states that Arts & Sciences courses numbered in the 400 series are ordinarily open to both graduate and undergraduate students. These courses may be taken by graduate students only if they are directly related to their field of study and form a necessary background. When these conditions apply, graduate students will be permitted to register for them, but they may not ordinarily be counted for credit toward a graduate degree, and they are not covered by tuition scholarships unless approved by the Dean of the Graduate School. Please discuss with your mentor.

- 503. Seminar: Experimental Social Psychology
- 5011. Research Designs and Methods
- 5015. The Psychology of Academia
- 5066. Quantitative Methods I
- 5067. Quantitative Methods II
