Post-Baccalaureate Research Opportunities in Functional Neuroimaging at the Duke’s Brain Imaging and Analysis Center

Are you graduating in Spring 2018?
Are you interested in learning about how the brain works?
Do you want to gain research experience before applying for graduate or medical school?

Post-baccalaureate positions are available at the Brain Imaging and Analysis Center (BIAC), a research facility of Duke University. Individuals will perform cutting-edge research in laboratories under the mentorship of a Principal Investigator. Positions are typically full-time staff positions with benefits that are funded by the sponsoring PI for 1 or 2 years. There are opportunities for involvement in career and course development such as curriculum vitae and resume writing workshops, preparation for graduate school interviews and the opportunity to audit an fMRI course.

Fellowships begin in June 2018 and last for one or two years. Competitive stipends are provided.

Deadline: March 9, 2018
